

### **Amendments to the Claims**

Please amend the claims as follows:

1. (Currently Amended) A vehicle navigation system comprising:

first and second recording devices storing therein first and second computer programs, respectively, wherein said first and second computer programs are used for vehicle navigation;

a first execution module executing said first computer program;

a second execution module executing said second computer program;

an install module transferring data stored in said second recording device to said first recording device,

wherein said install module and said second execution module concurrently operate, and said first execution module is prohibited from operating during operation of said second execution module,

wherein during an operation of said install module, said second execution module executes said vehicle navigation using said second computer program by using transferred data ~~of said data~~ which are transferred from said second recording device ~~[[to]]~~ and installed in said first recording device by said install module.

2. (Original) The vehicle navigation system according to claim 1, wherein said data stored in said second recording device includes compressed data, and said install module decompresses said compressed data to make decompressed data and transfers said decompressed data to said first recording device.

3. (Original) The vehicle navigation system according to claim 2, wherein when said compressed data is necessary for vehicle navigation, said second execution module executes said second computer program by using said decompressed data when said decompressed data have been transferred to said first recording device, and terminates said second computer program when said decompressed data have not been transferred to said first recording device.

4. (Original) The vehicle navigation system according to claim 3, wherein said decompressed data includes a third computer program and said second executing module executes said third computer program.

5. (New) The vehicle navigation system according to claim 1, further comprising a determination unit determining whether or not data necessary for said vehicle navigation have been transferred to said first recording device,

wherein when said data necessary for vehicle navigation is determined by said determination unit to be transferred to said first recordation device, said second execution module executes said vehicle navigation using said second computer program by using said transferred data during said operation of said install module.
